## **BLUTGO**

**BLUTGO** was specially developed for the treatment and curing of “blue tongue” in animals. **BLUTGO** is totally safe to use and environmentally friendly.

### **General Working**

The insect, a red mite, will attack the tongue of the animal and will slowly “eat” it away causing the death of the animal. **BLUTGO** will kill the insect, and will help with the healing process of the tongue. **BLUTGO** will also sterilize the area around the mouth of the animal. Because the animal drinks the **BLUTGO** in the water it will automatically cure the area in and around the mouth. This makes **BLUTGO** a highly effective but totally safe product for humans, animals and plants.

### **General Use**

- ◆ Curing and treatment of animals with blue tongue
- ◆ Eliminating the source of blue tongue

### **Dosing Method**

- ◆ Spray river or dam edge near grazing with **BLUTGO** approximately a two-meter strip.
- ◆ Product must be added to the drinking water. This will ensure that no other animal can be contaminated through drinking water.
- ◆ Rinse the mouth of the animal with **BLUTGO** if possible.

### **Dilutions**

- ◆ For application with back sprayers (grazing area) 1 : 50 000
- ◆ For drinking water initially 1 : 50 000 and after 1 : 75 000 – 100 000
- ◆ For rinsing mouth of animal 1 : 50 000
