GES-OILSORB - GP & REMEDIAL

HYDROCARBON & SOLVENT ABSORBENT TECHNOLOGY

APPLICATION AND METHODOLOGY

GES-OILSORB will absorb up to eight times more oil or oil based products than clay (kitty litter) and is a preferred hydrocarbon absorbent. GES-OILSORB is the only known absorbent being manufactured today that has been inoculated with hydrocarbon eating bacteria (microbes) and nutrients.

These natural microbes then biodegrade both itself and the oil by means of bio-remediation. GES-OILSORB is especially efficient on floors where a safe (no sheen), quick and cost effective cleanup is required.

COST

GES-OILSORB is very cost effective. GES-OILSORB is easy to apply and highly effective.

GES-OILSORB TECHNICAL DATA

Granular organic product.
Brown in colour
Slight musty odour
Absorbs oil from water

Remedial properties	Very Good
Oil absorption	Very Good
