STERISEW

STERISEW is a industrial strength dis-infectant and algae killer. ***STERISEW*** was exclusively developed for the dis-infection of final effluent at waste water treatment plants (WWTP) but can also be used in many different applications.

GENERAL APPLICATIONS

- ◆ Dis-infection of large volumes of final effluent from waste water treatment plants
- ◆ Dis-infection of final effluent from industrial waste water
- ◆ Dis-infection of final effluent from industrial waste sites
- ◆ Treatment of large volumes of water contaminated by bacteria/sewage
- ◆ Treatment of abattoir waste and waste water

DOSING METHOD

- ◆ ***STERISEW*** is dosed via a dosing pump. Flow proportional or continuous dosing
- ◆ By means of a crop sprayer

TESTING

- ◆ Bacterial viability test should be carried out regularly to ensure the efficient dis-infection of the contaminated area or volume of water or waste water or soil.

DILUTION

- ◆ ***STERISEW*** is diluted 1 : 300 000
- ◆ If the application is small it is recommended to dilute ***STERISEW*** to make dosing easier
